Atlanta, GA 30303

Proposal

This project proposal outlines the development of a centralized hospital time and attendance tracker designed to accurately capture employee clock-in and clock-out data while automatically monitoring and tallying attendance occurrences throughout the course of an employee's tenure. The system will provide real-time visibility into attendance patterns, reduce manual tracking errors, support consistent application of attendance policies, and generate actionable reports for leadership, including HR. By integrating occurrence tracking with time and attendance data, the tool will promote accountability, improve workforce management, and support data-driven decisions related to staffing, performance management, and operational efficiency across the organization.

Goals

1. Accurately track employees daily clock-in and clock-out times in a centralized system
2. Maintain a clear, ongoing attendance record throughout an employee's tenure
3. Automatically identify and tally attendance occurrences to reduce manual tracking and administrative error
4. Ensure consistent and fair application of attendance policies
5. Provide real-time visibility into attendance trends and patterns
6. Support fair, data-informed conversations between staff, leadership, and HR
7. Keep the process simple, accessible, and easy to understand for all users
