

TIME AND ATTENDANCE TRACKER

MARCUS GRAHAM

PROJECT SUMMARY

The Vision: A centralized digital system designed to capture precise clock-in/out data and automate attendance monitoring.

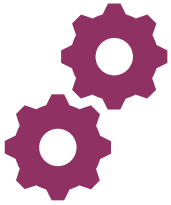

Core Functionality:

Automatic tallying of attendance occurrences over an employee's entire tenure.
Real-time visibility into workforce patterns.
Seamless integration between time logs and policy enforcement.

Primary Value: Reducing manual errors while promoting accountability and operational efficiency across the hospital.

STRATEGIC GOALS & IMPACT

Accuracy & Automation:

Centralize daily time tracking to eliminate manual entry errors.

Automate "occurrence" identification for administrative consistency.

Policy & Fair Practice:

Ensure fair application of attendance policies across all departments.

Provide objective data for leadership and HR performance reviews.

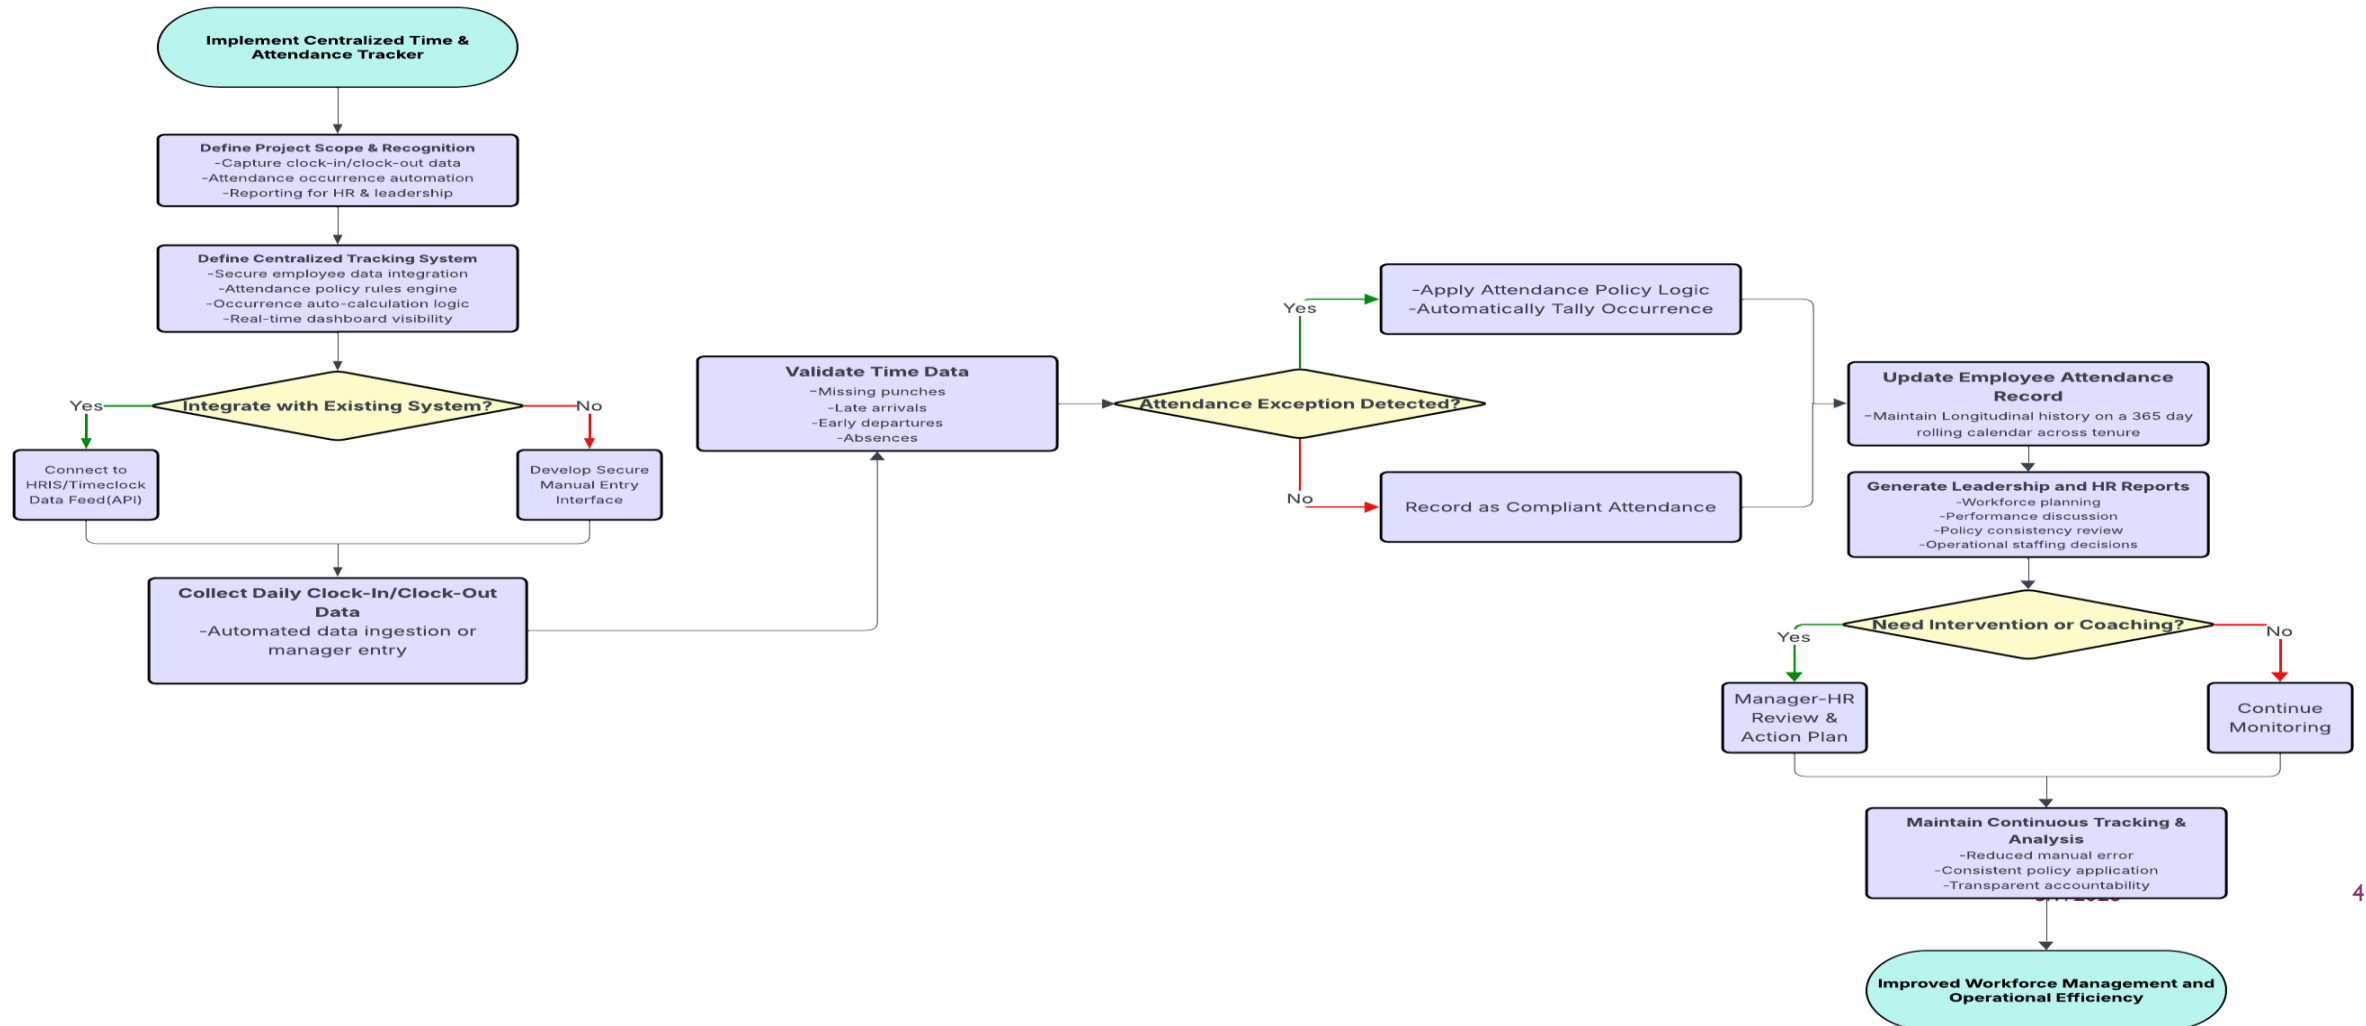

Accessibility:

Maintain a simple, user-friendly interface for all staff members.

Generate actionable reports to drive staffing and performance decisions.
